

Turf Services Performed Today

____/____/____

Round #5: Please Stay Off Treated Areas Until Dry

____ **Fertilization:** A balanced granular product containing fast and slow release nutrients was applied to your turf. **This application should be watered within 1-2 weeks for best results.**

____ **Broadleaf Weed Management/Annual Grasses Control:** A liquid selective herbicide was applied to broadleaf weeds and annual undesirable grasses. This product will usually be effective upon drying. **It is recommended that you DO NOT water immediately after application for best results.**

____ **Seeding:** A professional blend of certified seed was applied in conjunction with one or more of the following methods as a follow-up to your aeration/over-seed. **Seeded areas should be kept moist for 15-30 days to allow for germination.**

____ **Overseed** ____ **Spot/Detail** ____ **Slice Seeding** ____ **Raking/Tilling**

____ **Lime:** Lime has been applied to your turf areas to raise or maintain the pH of your soil at recommended levels. We apply lime based upon the pH of your soil. A pH of 6.0 to 7.0 is the proper range for turf grasses in our area with the optimum being around 6.5 pH. Any lime applied is a dolomitic pelletized lime that is usually dark gray in color and breaks down quickly. Visual evidence of this application is difficult to see.

Round #5 Turf Care Notes:

The fertilizer applied will provide nutrients for maintaining good green color and provide for root development to your existing turf and any new seedlings this fall and provide for a quick, healthy, and green start next spring. The broadleaf weed management control is typically a spot spray to control weeds that are present. Disease is not usually a factor at this time of year and generally cannot survive in cool/cold temperatures. If you are a Silver or Gold Turf Program client, you will have spot seeding done, as needed, in thin areas, as a follow-up to your aeration and overseed services done previously.

If you have an automatic irrigation system, please remember to have it winterized. There should be no need to water/irrigate established grass and plants at this time of year.

Please contact Client Services if you have any questions regarding this service.
